Table 1: Absolute performance results in MRays/s for the 2-wide reference [Aila et al. 2012] utilizing triangle duplication according to the original implementation (first column). Results are segmented into primary, diffuse first bounce, and diffuse eighth bounce. The relative performance values of the 4-wide reference [Guthe 2014] and our approaches with 2-, 4-, and 8-wide BVHs are normalized to the 2-wide reference.
