

EuroRV³ 2018

EuroVis Workshop on Reproducibility, Verification, and Validation in Visualization

**Brno, Czech Republic
June 4, 2018**

Workshop Chairs

Kai Lawonn
Assistant Professor for Medical Visualization
University of Koblenz – Landau, Germany

Noeska Smit
Associate Professor in Medical Visualization
University of Bergen, Norway

Lars Linsen
Professor (W3) of Computer Science
University of Münster, Germany

Robert Kosara
Research Scientist
Tableau Software, United States

Proceedings Production Editor

Dieter Fellner (TU Darmstadt & Fraunhofer IGD, Germany)

Sponsored by EUROGRAPHICS Association

Table of Contents

Table of Contents	iii
Preface	iv
International Programme Committee	v
Author Index	vi
Invited Talks – Keynotes	vii
Session 1	
Visual Analytics-enabled Bayesian Network Approach to Reasoning about Public Camera Data	1
<i>Ekaterina Chuprikova, Alan M. MacEachren, Juliane Cron, and Liqiu Meng</i>	
Visualizing Uncertainty in Cultural Heritage Collections	7
<i>Florian Windhager, Velitchko Andreev Filipov, Saminu Salisu, and Eva Mayr</i>	
Uncertainty Visualization: Recent Developments and Future Challenges in Prostate Cancer Radiotherapy Planning	13
<i>Renata G. Raidou</i>	
Session 2	
Toward Visualizing Subjective Uncertainty: A Conceptual Framework Addressing Perceived Uncertainty through Action Redundancy	19
<i>Wei Li, Mathias Funk, and Aarnout C. Brombacher</i>	
Uncertainty of Visualizations for SenseMaking in Criminal Intelligence Analysis	25
<i>M. Junayed Islam, Kai Xu, and B. L. W. Wong</i>	

Preface

The sixth EuroRVVV (EuroVis Workshop on Reproducibility, Verification, and Validation in Visualization) workshop was co-organized by Noeska Smit (University of Bergen, Norway), Kai Lawonn (University of Koblenz - Landau, Germany), Lars Linsen (Universität Münster, Germany), and Robert Kosara (Tableau, USA). The call for papers this year focused on the topic of ‘Uncertainty in Visualization’. Submitted papers underwent a one-stage peer-review process, and five papers were accepted for presentation. The full program featured a combination of paper presentations and invited talks.

International Programme Committee

Christian Hansen, Otto von Guericke University, Germany

Thomas Höllt, Delft University of Technology and Leiden University Medical Center, The Netherlands

Steffen Oeltze-Jafra, University Leipzig, Germany

Renata Raidou, TU Wien, Austria

Paul Rosen, University of South Florida, USA

Rüdiger Westermann, TU München, Germany

Author Index

Brombacher, Aarnout C.	19	Mayr, Eva	7
Chuprikova, Ekaterina	1	Meng, Liqiu	1
Cron, Juliane	1	Raidou, Renata G.	13
Filipov, Velitchko Andreev	7	Salisu, Saminu	7
Funk, Mathias	19	Windhager, Florian	7
Islam, M. Junayed	25	Wong, B. L. W.	25
Li, Wei	19	Xu, Kai	25
MacEachren, Alan M.	1		

Keynote

Making Uncertainties Explicit

Hans-Christian Hege

Head of the Visual Data Analysis Department at Zuse Institute Berlin (ZIB), Germany

Abstract

Data comes either from measurements that directly capture properties of reality, or from simulations that provide properties of models that represent the parts of reality. All data, with a few exceptions, is subject to uncertainties. In the computational processes during data analysis additional uncertainties might creep in. When drawing conclusions from data, e.g. when testing hypotheses or making decisions, significant uncertainties need to be considered. In visualizations, such uncertainties should therefore be indicated or, if desired by the user, presented in detail. This requires two basic capabilities: (i) quantification of uncertainties and (ii) visualization of quantified uncertainties. The presentation discusses the different types of uncertainties and provides a brief overview of formal means of representing and quantifying uncertainties. It will be explained, how uncertainties propagate along the visualization pipeline and where additional uncertainties might slip in. Examples will be presented of how data afflicted with uncertainties can be visualized. Finally, various challenges in visually supported analysis of uncertain data will be discussed.

Invited Talks

Visualizing Temporal Uncertainty

Theresia Gschwandtner

Scientific researcher at the Visual Analytics group, Institute of Visual Computing and Human-Centered Technology, TU Wien

Abstract

Real world datasets often contain some amount of uncertainty. This is especially true for time series data which might contain uncertainties about the timing of past and future events. Simply neglecting these uncertainties when visualizing data might result in wrong interpretations and misjudgements of the viewer. However, it is still not clear which techniques are best suited to visualize temporal uncertainties, what representations are best understood and intuitive, and if the explicit visualization of temporal uncertainty information is beneficial at all. In this talk, I will present examples of past, present, and future work, and I will outline different research challenges in the field of temporal uncertainty visualization.

Perception, Comparison, and Models for Uncertainty

Michael Gleicher

Professor at the Department of Computer Sciences, University of Wisconsin, Madison, USA

Keynote

Ensemble Visualization - Visualizing the Uncertainty That is Represented by an Ensemble of Fields

Rüdiger Westermann

Head of the chair for Computer Graphics and Visualization at Technische Universität München, Germany

Abstract

Each member of an ensemble simulation shows a possible occurrence of one or several physical fields, and domain experts are concerned with analyzing the uncertainty that is represented by these fields. Due to the sheer volume of such ensembles, their inherent spatial and temporal aspects, as well as the complex spatio-temporal relations between features in these fields, classical data mining and statistical analysis techniques become increasingly limited. While simple analysis tasks, like finding commonalities or differences at fixed locations in space and time, can be realized in an automated way, a meaningful and intuitive depiction of the uncertainty that is carried by an ensemble is challenging. When directional quantities and spatio-temporal relations between ensemble members have to be analyzed, the limitations of available techniques become even more severe and new approaches are required. In this talk I will shed light on the relation between ensemble and uncertainty visualization, and I will discuss a variety of visualization techniques for scalar- and vector-valued ensemble fields. This is followed by a summary of current and future challenges in ensemble visualization.
