Historians work with **documents** which link people together in **social relationships**. Examples are marriage acts, birth certificates or working contracts.

### Network representation

We modelize the data as **dynamic multivariate bipartite networks.** Here is an example of **construction contracts** in Piemont, Italy from the 18th century.

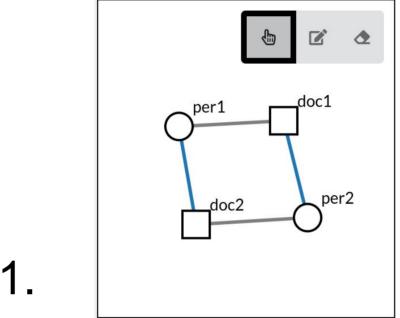

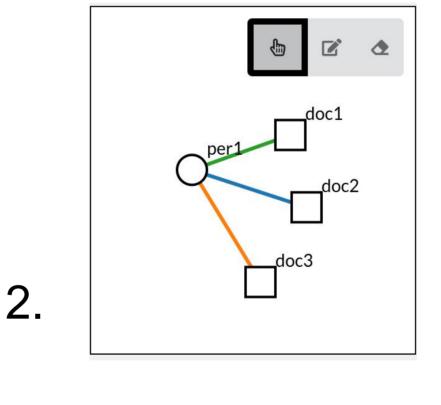

## Questions Examples

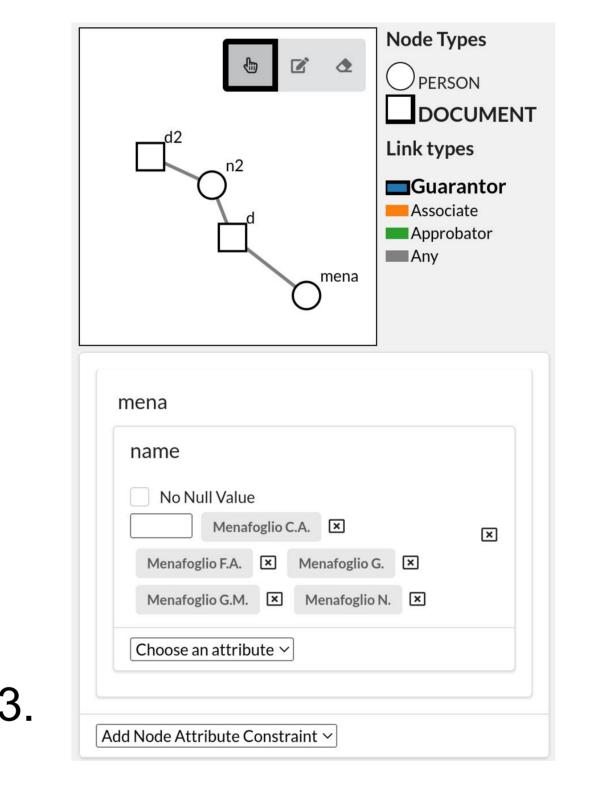

### Visual Queries

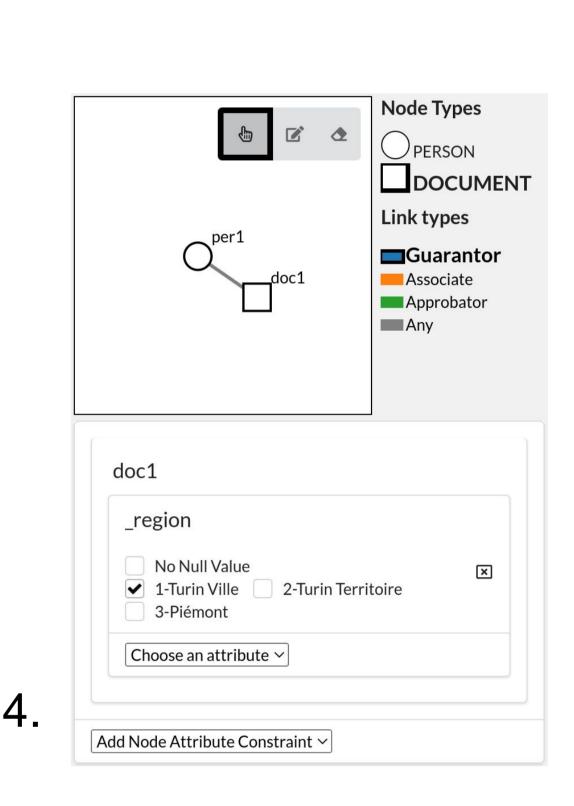

Visual queries allow to build topological and attribute constraints easily.

- 1. Find the pairs or persons who are mutually guarantor to each other in two separate construction documents.
- 2. Who are the persons with 3 different roles: Guarantor, Associate and Approbator.
- 3. Find the persons who are collaborating with the Menafoglio family.
- 4. What are the characteristics of the construction documents in Torino, and who are the people working there.
