

# VMV 2022

## Vision, Modeling, and Visualization

**Konstanz, Germany**  
**September 27 — 30, 2022**

### **General Chair**

Oliver Deussen, University of Konstanz

### **Program Chairs**

Jan Bender, RWTH Aachen University

Mario Botsch, University of Bielefeld

Daniel A. Keim, University of Konstanz

### **Proceedings Production Editor**

Dieter Fellner (TU Darmstadt & Fraunhofer IGD, Germany)

In cooperation with the Eurographics Association

## Table of Contents

Table of Contents .....	iii
International Program Committee .....	v
Author Index .....	vi
Keynotes .....	vii
<b>Joint Session</b>	
Local Attention Guided Joint Depth Upsampling .....	1
<i>Arijit Mallick, Andreas Engelhardt, Raphael Braun, and Hendrik P. A. Lensch</i>	
Evaluation of Volume Representation Networks for Meteorological Ensemble Compression .....	9
<i>Kevin Höhle, Sebastian Weiss, and Rüdiger Westermann</i>	
Neural Adaptive Scene Tracing (NAScenT) .....	17
<i>Rui Li, Darius Rückert, Yuanhao Wang, Ramzi Idoughi, and Wolfgang Heidrich</i>	
<b>Session I</b>	
Interactive Segmentation of Textured Point Clouds .....	25
<i>Patric Schmitz, Sebastian Suder, Kersten Schuster, and Leif Kobbelt</i>	
Alignment and Reassembly of Broken Specimens for Creep Ductility Measurements .....	33
<i>Volker Knauthe, Maurice Kraus, Max von Buelow, Tristan Wirth, Arne Rak, Laurenz Merth, Alexander Erbe, Christian Kontermann, Stefan Guthe, Arjan Kuijper, and Dieter W. Fellner</i>	
Relaxed Parallel Priority Queue with Filter Levels for Parallel Mesh Decimation .....	41
<i>Marvin Stümmel, Felix Brüll, and Thorsten Grosch</i>	
Clasping Trees - A Pipeline for Interactive Procedural Tree Generation .....	49
<i>Simon J. Lieb, Nicolas Klee, and Kai Lawonn</i>	
<b>Session II</b>	
Visualizing the Movement of Space-Defining Rotatable Elements in Architecture .....	57
<i>Ayumi Ehgartner, Julia Hemmerling, Elli Mosayebi, and Tobias Günther</i>	
Honeycomb Plots: Visual Enhancements for Hexagonal Maps .....	65
<i>Thomas Trautner, Maximilian Sbardellati, Sergej Stoppel, and Stefan Bruckner</i>	
Visualizing Optimizers using Chebyshev Proxies and Fatou Sets .....	75
<i>Rene Winchenbach and Nils Thuerey</i>	

## Table of Contents

### Session III

- An Overview of Techniques for Egocentric Black Hole Visualization and Their Suitability for Planetarium Applications ..... 83  
*Anny-Marleen Hissbach, Christian Dick, and Kai Lawonn*
- Astray: A Performance-Portable Geodesic Ray Tracer ..... 91  
*Ali Can Demiralp, Marcel Krüger, Chu Chao, Torsten W. Kuhlen, and Tim Gerrits*

### Session IV

- HandFlow: Quantifying View-Dependent 3D Ambiguity in Two-Hand Reconstruction with Normalizing Flow ..... 99  
*Jiayi Wang, Diogo Luvizon, Franziska Mueller, Florian Bernard, Adam Kortylewski, Dan Casas, and Christian Theobalt*
- Semi-Automatic Particle Tracking for and Visualization of Particle Detector Data ..... 107  
*Robin Eschbach, Kai Messerschmidt, Ralf Keidel, and Alexander Wiebel*

### Session V

- Visually Comparing Rendering Performance from Multiple Perspectives ..... 115  
*Hagen Tarnier, Valentin Bruder, Steffen Frey, Thomas Ertl, and Fabian Beck*
- Real-Time Caustics Using Cascaded Image-Space Photon Tracing ..... 127  
*Krittin Meenrattanakorn and Martin Lambers*
- Efficient High-Quality Rendering of Ribbons and Twisted Lines ..... 135  
*Christoph Neuhauser, Junpeng Wang, Michael Kern, and Rüdiger Westermann*
- A Moving Least Squares Material Point Method for Varied Porous Material Interactions and Non-sticky Coupling of Phases ..... 145  
*Alexander Maximilian Nilles and Stefan Müller*

## **International Program Committee**

Jürgen Bernard, University of Zurich, Switzerland  
David Bommes, University of Bern, Switzerland  
Marcel Campen, Osnabrück University, Germany  
Achim Ebert, Technical University of Kaiserslautern, Germany  
Peter Eisert, Fraunhofer HHI Berlin, Germany  
Menna El-Assady, ETH Zurich, Switzerland  
Steffen Frey, University of Groningen, The Netherlands  
Xifeng Gao, Tencent America, Bellevue, Washington, United States  
Christoph Garth, University of Kaiserslautern, Germany  
Tobias Günther, University of Erlangen-Nuremberg, Germany  
Stefan Gumhold, Technical University of Dresden, Germany  
Klaus Hildebrandt, Technical University of Delft, The Netherlands  
Kai Hormann, Università della Svizzera italiana, Italy  
Ingrid Hotz, Linköping University, Sweden  
Jiang Xiaoyi, University of Münster, Germany  
Andreas Kolb, University of Siegen, Germany  
Michael Krone, University of Tübingen, Germany  
Torsten Kuhlen, RWTH Aachen University, Germany  
Bastian Leibe, RWTH Aachen University, Germany  
Dominik L. Michels, KAUST, Thuwal, Saudi Arabia  
Silvia Miksch, Technical University of Vienna, Austria  
Martin Oswald, ETH Zurich, Switzerland  
Reinhold Preiner, Technical University of Graz, Austria  
Filip Sadlo, University of Heidelberg, Germany  
Teseo Schneider, University of Victoria, Canada  
Tobias Schreck, Technical University of Graz, Austria  
Thomas Schultz, University of Bonn, Germany  
Michael Sedlmair, University of Stuttgart, Germany  
Marc Stamminger, University of Erlangen-Nuremberg, Germany  
Jörg Stückler, Max Planck Research Group, Tübingen, Germany  
Matthias Teschner, University of Freiburg, Germany  
Holger Theisel, University of Magdeburg, Germany  
Christian Tominski, University of Rostock, Germany  
Tino Weinkauff, KTH Royal Institute of Technology, Sweden

## Keynote

*Michael Bronstein*

### **Biographical Note**

Michael Bronstein is the DeepMind Professor of AI at the University of Oxford and Head of Graph Learning Research at Twitter. He was previously a professor at Imperial College London and held visiting appointments at Stanford, MIT, and Harvard, and has also been affiliated with three Institutes for Advanced Study (at TUM as a Rudolf Diesel Fellow (2017-2019), at Harvard as a Radcliffe fellow (2017-2018), and at Princeton as a short-time scholar (2020)). Michael received his PhD from the Technion in 2007. He is the recipient of the Royal Society Wolfson Research Merit Award, Royal Academy of Engineering Silver Medal, five ERC grants, two Google Faculty Research Awards, and two Amazon AWS ML Research Awards. He is a Member of the Academia Europaea, Fellow of IEEE, IAPR, BCS, and ELLIS, ACM Distinguished Speaker, and World Economic Forum Young Scientist. In addition to his academic career, Michael is a serial entrepreneur and founder of multiple startup companies, including Novafora, Invision (acquired by Intel in 2012), Videocites, and Fabula AI (acquired by Twitter in 2019).

## Keynote

### Employing Immersive Virtual Reality to Reveal Principles of Decision-Making

*Iain Couzin*

#### **Abstract**

I will discuss our development and application of new technologies for automated tracking and identification of unmarked individuals, computational sensory reconstruction, bio-mimetic robotics, and ‘holographic’ virtual reality (VR) for animals, and demonstrate how these quantitative methodologies provide new insights into individual and collective sensing and decision-making. For example, they allow us to reconstruct (automatically) the dynamic, time-varying sensory networks in large animal collectives, to identify at any instant in time the most socially-influential individuals within groups, and to predict cascades of social contagion (behavioral change) before they actually occur. Furthermore, such methodologies enable us to study phenomena across multiple scales of biological organization, from neural interactions to individual and collectives decision-making. Specifically, we have recently investigated how animals choose among spatial discrete options, a central challenge in their lives. Employing an integrated theoretical and experimental approach (using immersive VR), we find that the brain spontaneously reduces multi-choice decisions into a series of abrupt (critical) binary decisions in space-time, a process that repeats until only one option—the one ultimately selected by the individual—remains. This mechanism facilitates highly accurate decision-making, and is shown to be robust both to the number of options available, and to context. Finally, I will show that reverse-engineering evolved solutions can provide new design principles for engineered systems. Employing three considerably different physical robotic platforms—terrestrial vehicles, airborne drones and watercraft—it will be demonstrated that the evolved biological controller, as revealed by VR, provides highly effective performance in all scenarios, utilizing very close to optimal control energy, while requiring no system-specific tuning, and with minimal sensing and computational requirements.

#### **Biographical Note**

Iain Couzin is Director of the Max Planck Institute of Animal Behavior and Speaker of the Excellence Cluster “Centre for the Advanced Study of Collective Behaviour” at the University of Konstanz, Konstanz, Germany. Previously he was an Assistant- and then Full-Professor in the Department of Ecology and Evolutionary Biology at Princeton University, and prior to that a Royal Society University Research Fellow in the Department of Zoology, University of Oxford, and a Junior Research Fellow in the Sciences at Balliol College, Oxford. His work aims to reveal the fundamental principles that underlie evolved collective behavior, and consequently his research includes the study of a wide range of biological systems, from neural collectives to insect swarms, fish schools and primate groups. In recognition of his research he has been recipient of the Searle Scholar Award in 2008, top 5 most cited papers of the decade in animal behavior research 1999-2010, the Mohammed Dahleh Award in 2009, Popular Science’s “Brilliant 10” Award in 2010, National Geographic Emerging Explorer Award in 2012, the Scientific Medal of the Zoological Society of London in 2013, a Web of Science Global Highly Cited Researcher since 2018, the Lagrange Prize in 2019, and the Falling Walls Life Sciences Award and the Gottfried Wilhelm Leibniz Prize in 2022.

## Keynote

### Towards Systems that Learn by Themselves

*Paolo Favaro*

#### **Abstract**

The ultimate goal of AI is to build systems that act rationally. Towards this goal it is necessary to think of the key mechanisms for how such systems would learn from data. From the point of view of feasibility and given the amount of data that must be processed, these systems should work with as little manual guidance as possible. Ideally, they should learn directly from data, eg, images, videos and audio, all the information that they need to operate. This has been the philosophy in all my research. I will illustrate several examples of work that we have done in two areas: Computational Photography and Representation Learning, and highlight the focus on avoiding human annotation and its benefits.

#### **Biographical Note**

Paolo Favaro received the Laurea degree (B.Sc.+M.Sc.) from Università di Padova, Italy in 1999, and the M.Sc. and Ph.D. degree in electrical engineering from Washington University in St. Louis in 2003 and 2004 respectively. He was a postdoctoral researcher in the computer science department of the University of California, Los Angeles and subsequently in Cambridge University, UK. Between 2004 and 2006 he worked in medical imaging at Siemens Corporate Research, Princeton, USA. From 2006 to 2011 he was Lecturer and then Reader at Heriot-Watt University and Honorary Fellow at the University of Edinburgh, UK. In 2012 he became full professor at Universität Bern, Switzerland. His research interests are in computer vision, computational photography, machine learning, signal and image processing, estimation theory, inverse problems and variational techniques. He is also a member of the IEEE Society.
