

Figure 1: Comparisons c of different temporal resolutions $N \in \{1, \dots, 5\}$ for positive advection time $\tau = 10$. N grows from 1 (left) to 5 (right) for our method and grows from 1 (top) to 5 (bottom) for Agranovsky et al. .

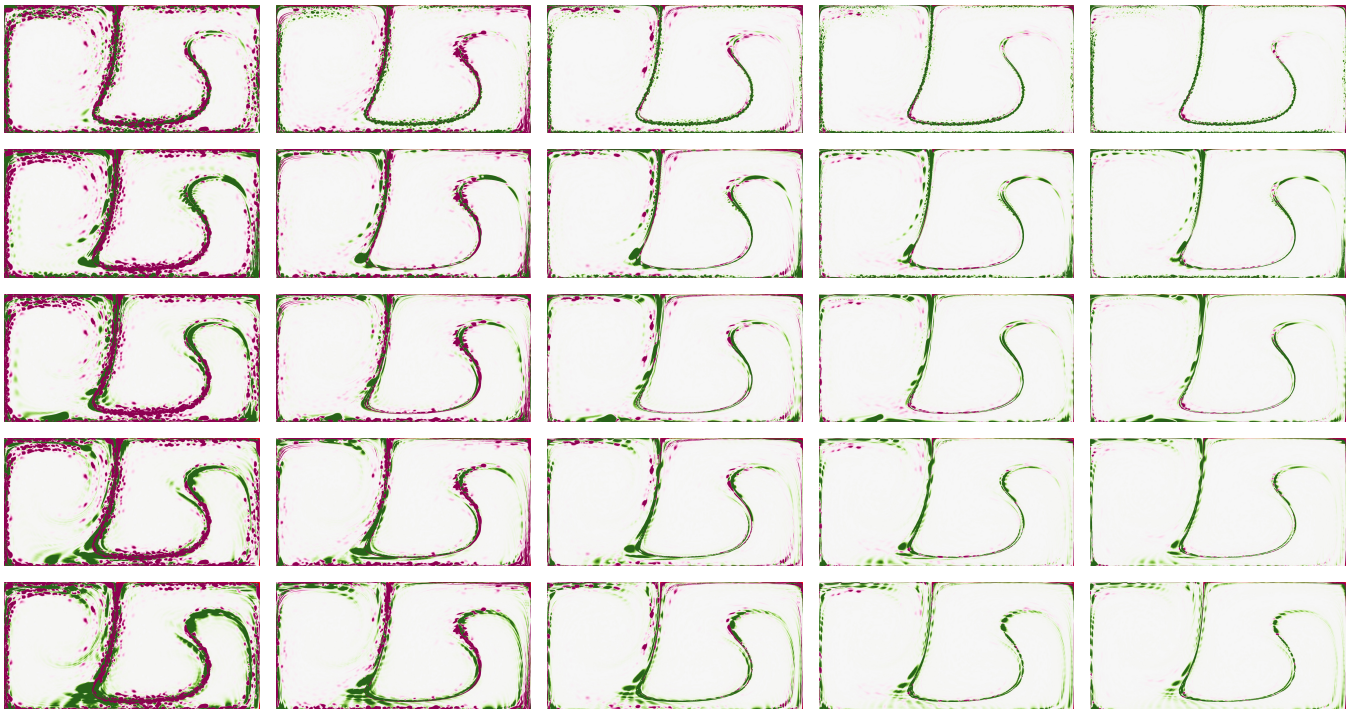

Figure 2: Comparisons c of different temporal resolutions $N \in \{1, \dots, 5\}$ for negative advection time $\tau = -10$. N grows from 1 (left) to 5 (right) for our method and grows from 1 (top) to 5 (bottom) for Agranovsky et al. .
